

Vehicles parked in cul-de-sacs can be a particular challenge for plow operators when it comes to snow removal. The Township also requests that basketball backboard systems be immediately removed from the public street as this impedes our plow operators from safely and efficiently treating the streets.

To reduce the amount of snow that is plowed at your driveway entrance from the public street, please consider removing or snow blowing the snow that is located when facing your driveway to the right as illustrated below into your front yard. Be sure not to deposit any snow from your property onto the public street as this causes a safety hazard with freezing, especially overnight when temperatures drop, and reduces the efficiency of our salting/cindering treatment.

On behalf of the dedicated employees of Cumberland Township, we THANK-YOU for your cooperation!
