

COMMONWEALTH OF PENNSYLVANIA DEPARTMENT OF ENVIRONMENTAL PROTECTION BUREAU OF SAFE DRINKING WATER

2019 ANNUAL DRINKING WATER QUALITY REPORT
PWSID #: 7010022 NAME: Borough of Littlestown
Este informe contiene información importante acerca de su agua potable. Haga que alguien lo traduzca para usted, ó hable con alguien que lo entienda. (This report contains important information about your drinking water. Have someone translate it for you, or speak with someone who understands it.)
WATER SYSTEM INFORMATION:
This report shows our water quality and what it means. If you have any questions about this report or concerning your water utility, please contact Ed Santamaria at 717-359-5636 . We want you to be informed about your water supply. If you want to learn more, please attend any of our regularly scheduled meetings. They are held the second and fourth Tuesday of every month at 10 South Queen Street.
SOURCE(S) OF WATER:
Our water source(s) is/are: (Name-Type-Location)
S. Queen St. wells 1 & 2 / groundwater / South end of Borough
St. Johns well 11, Briarwood, Heritage / groundwater / West end of Borough
Lumber St. wells 5-6-9, Meadowview A&D / groundwater / East end Borough
Appler wells 0 & 5 / groundwater / North end of Borough

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the *Safe Drinking Water Hotline* (800-426-4791).

MONITORING YOUR WATER:

We routinely monitor for contaminants in your drinking water according to federal and state laws. The following tables show the results of our monitoring for the period of January 1 to December 31, 2019. The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data is from prior years in accordance with the Safe Drinking Water Act. The date has been noted on the sampling results table.

DEFINITIONS:

Action Level (AL) - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Minimum Residual Disinfectant Level (MinRDL) - The minimum level of residual disinfectant required at the entry point to the distribution system.

Level 1 Assessment – A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment – A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an *E. coli* MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

Treatment Technique (TT) - A required process intended to reduce the level of a contaminant in drinking water.

Mrem/year = millirems per year (a measure of radiation absorbed by the body)	<pre>ppm = parts per million, or milligrams per liter (mg/L)</pre>
<pre>pCi/L = picocuries per liter (a measure of radioactivity)</pre>	ppq = parts per quadrillion, or picograms per liter
ppb = parts per billion, or micrograms per liter (μ g/L)	ppt = parts per trillion, or nanograms per liter

DETECTED SAMPLE RESULTS:

Chemical Cor	ntaminant	S						
Contaminant	MCL in CCR Units	MCLG	Level Detected	Range of Detections	Units	Sample Date	Violation Y/N	Sources of Contamination
Chlorine	MRDL= 4	MRDLG =4	1.14	0.6-1.14	ppm	2019	N	Water additive used to control microbes.
Nitrate	10	10	6.46	0.46-6.46	ppm	2019	N	Runoff from fertilizer use.
HAA5	60	N/A	8.93	N/A	ppb	2019	N	By-product of drinking water disinfection
ТТНМ	80	N/A	37.6	N/A	ppb	2019	N	By-product of drinking water chlorination
Fluoride	2	2	0.2	0-0.2	ppm	2019	N	Water additive which promotes strong teeth.
Combined Uranium	20	0	. 2.25	1.00-2.25	ug/l	2017	N	Erosion of natural deposits.
Combined Radium	5	0	3.46	N/A	pci/l	2017	N	Erosion of natural deposits.

^{*}EPA's MCL for fluoride is 4 ppm. However, Pennsylvania has set a lower MCL to better protect human health.

Entry Point Dis	infectant Res	sidual					
Contaminant	Minimum Disinfectant Residual	Lowest Level Detected	Range of Detections	Units	Sample Date	Violation Y/N	Sources of Contamination
Chlorine	0.40	0.41	0.41-1.98	ppm	2019	N	Water additive used to control microbes.

Lead and Copper							
Contaminant	Action Level (AL)	MCLG	90 th Percentile Value	Units	# of Sites Above AL of Total Sites	Violation Y/N	Sources of Contamination
Lead	15	0	0	ppb	0 out of 20	N	Corrosion of household plumbing.
Copper	1.3	1.3	0.16	ppm	0 out of 20	N	Corrosion of household plumbing.

Contaminants	тт	MCLG	Assessments/ Corrective Actions	Violation Y/N	Sources of Contamination
Total Coliform Bacteria	Any system that has failed to complete all the required assessments or correct all identified sanitary defects, is in violation of the treatment technique requirement	N/A	See detailed description under "Detected Contaminants Health Effects Language and Corrective Actions" section	N	Naturally present in the environment.

Microbial (related	d to E. coli)				<u> </u>
Contaminants	MCL	MCLG	Positive Sample(s)	Violation Y/N	Sources of Contamination
E. coli	Routine and repeat samples are total coliform-positive and either is <i>E. coli</i> -positive or system fails to take repeat samples following <i>E. coli</i> -positive routine sample or system fails to analyze total coliform-positive repeat sample for <i>E. coli</i> .	0	0	N	Human and animal fecal waste.
Contaminants	π	MĊLG	Assessments/ Corrective Actions	Violation Y/N	Sources of Contamination
E. coli	Any system that has failed to complete all the required assessments or correct all identified sanitary defects, is in violation of the treatment technique requirement	N/A	See description under "Detected Contaminants Health Effects Language and Corrective Actions" section	N	Human and animal fecal waste.

Raw Source Wate	er Microbial				resident of the second of the
Contaminants	MCLG	Total # of Positive Samples	Dates	Violation Y/N	Sources of Contamination
E. coli	0	N/A	N/A	N/A	Human and animal fecal waste.

DETECTED CONTAMINANTS HEALTH EFFECTS LANGUAGE AND CORRECTIVE ACTIONS:
Littlestown Borough did not have any violations in 2019
OTHER VIOLATIONS:
Littlestown Borough had 2 violations in 2019
1) Lead and copper samples were collected and turned in to labs Inc. on time. Labs Inc. did not report
results to the DEP data base by the deadline of 10/10/2019. This resulted in a violation.
2) Operator reported in error a chlorine reading of 0.4777 for Heritage well on the June 2019 monthly
report. The reading reported lasted for 30 minutes. The minimum chlorine required is 0.50 and is only a
violation if below 0.50 and lasting four or more hours. DEP reported that we were in violation anyway.

EDUCATIONAL INFORMATION:

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban stormwater run-off, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products
 of industrial processes and petroleum production, and can also come from gas stations, urban stormwater
 runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA and DEP prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA and DEP regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental

3930-FM-BSDW0113 Rev. 12/2018

Protection Agency's Safe Drinking Water Hotline (800-426-4791).

Information about Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young
children. Lead in drinking water is primarily from materials and components associated with service lines and
home plumbing. Littlestown Borough is
responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing
components. When your water has been sitting for several hours, you can minimize the potential for lead
exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are
concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking
water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water
Hotline or at http://www.epa.gov/safewater/lead.

OTHER INFORMATION:

About Nitrate: Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than six months
age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for shore
periods of time because of rainfall or agricultural activity. If you are caring for an infant, you should ask for advice
from your health care provider.
